

Fatal Vision Goggle Activities

1. About the Goggles

Fatal Vision goggles distort vision and cause behaviors similar to those exhibited by someone under the influence of alcohol or drugs.

We use the bronze label goggles in our program which represent a moderate level of impairment – estimated Blood Alcohol Concentration of .07 to .10+

The green shaded lenses simulate impairment at night.

2. Activities

-  Have each teen walk the line (they find the line on their own, walk with their hands out to side while looking straight ahead)
-  Have them pick up keys on the floor
-  Throw ball to each person one or two times and have them throw it back
